

Sage BusinessWorks News

We have a lot of news to cover, so here we go!

Lets start with the Sage Insights 2009 Conference in Knoxville. The new features in Sage BusinessWorks® Version 2010 include improved usability, security compliance, easier installation, and a fresh new look. We will be reviewing the Beta release later this month, for anyone who would like to get a peek before fall. Checkout page 2 for more detail of these enhancements.

Sage BusinessWorks Enhancement Spotlight	2
All Sage ClientCare Plans Offer Telephone Support and More!	2
Keystroke POS	3
Free Web Seminars	4

Next up, Vivian and I attended the 2009 Summit Conference in Frisco, Colorado, in May. Keystroke Advanced POS, which will start shipping this summer, is outstanding. The enlarged database records, lookup fields, price and tax tables, and PCI enhancements in Version 7 were very well done! We also worked with the Digital Sign Controller and QwikTouch Touch Screen Interface. We are currently Beta testing Advance POS and would be happy to show off these new features.

We have a new schedule of free web seminars on page 4, or call and we'll be glad to schedule an on-site or web demo. Keep reading for more exciting news!

Sage BusinessWorks® — Enhancement Spotlight

Here's a small sampling of the new features in Version 2010

Usability Improvements — Voiding a range of checks in Accounts Payable or Payroll opens up a viewer so that you can see and select exactly what will be voided.

Compliance — Security settings by user to allow the user to view, edit, or print on reports confidential information such as social security numbers and credit card information.

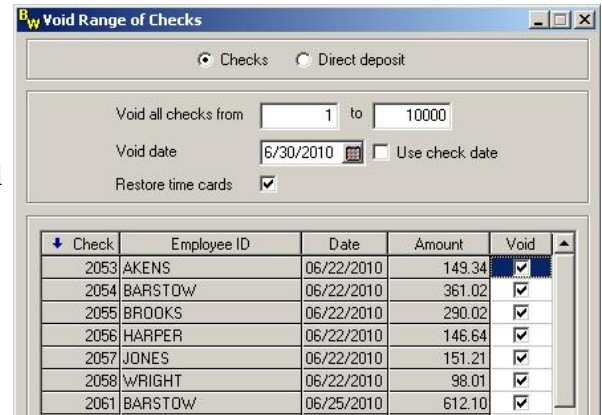

Pervasive V10 — Full support of Microsoft Windows Server 2008(32 bit only), easier installation, increased performance and enhanced compatibility with other Sage products.

Order Entry Returns — You can now select to post Invoice and Part Return directly to the original Sales Accounts, instead of the Sales Adjustments account.

Edit Partially Invoiced Sales Orders — Add new line items, miscellaneous charges, etc. to open, already partially invoiced Sales Orders!

And Finally- A New Report System — Built around the existing report system, there is at least one new report per module, with drill downs and drill to, built in!

Please call or email for more information on these new features. If you would like to participate in the Control Release and start using these features before the October shipping, please let us know.

All Sage ClientCare Plans Offer Telephone Support and More!

Sage Software has increased your benefits in your ClientCare program without raising your annual cost. You are now issued points which can be used toward your choice of Realtime Learning Courses, support calls or a both. QwikTouch Touch-Screen Software

QwikTouch Software can enhance nearly any Keystroke POS installation with powerful and flexible touch-functionality. QwikTouch can be configured using a standard button layout as shown below, or for more diverse applications, custom button templates can be created to your exact specifications.

Using the native versatility of the Keystroke POS system and the easy to use QwikTouch Editor utility, the possibilities are virtually endless! Each button can be defined to deliver a single key command to Keystroke, perform a sequence of commands, or access an alternate or multi-layered template. QwikTouch is designed to operate on touch-screen monitors — buttons can also be activated by mouse to provide macro functionality for repetitive tasks on any workstation.

Features & Benefits

- ◆ Faster transaction entry
- ◆ Easier clerk training
- ◆ Customizable template layout
- ◆ Active integration with Keystroke POS
- ◆ Easy installation, setup and implementation
- ◆ Resizable buttons, flat color or 3D
- ◆ Label buttons with graphic images or text
- ◆ Simple or complex layered templates

Keystroke Point Of Sale is a Perfect Solution for...

Bicycle stores, pet supply stores, computer stores, liquor stores, convenience stores, sporting goods stores, gift/specialty stores, book stores, toy stores, furniture stores, electronics stores, office supply stores, hardware stores, jewelry stores, tire/auto supply stores, pool supply stores, clothing/shoe stores, and many, many more!

Keystroke POS software is the core of the sales management and inventory control system used in thousands of independent stores, wholesale distributors, and specialty chains. Keystroke POS is an affordable and reliable off-the-shelf solution for owner operated retail stores, plus it offers unrivaled speed and flexibility for multi-lane and multi-location businesses. Keystroke POS links to most popular accounting programs, and can exchange data real-time with other systems including custom software solutions. The system is fully configurable to drive all the latest in POS hardware technology.

Keystroke
